

I feel that I benefit from listening to XM Satellite Radio and its traffic and weather channels. Satellite radio provides me with a variety and quality of service and "product", that are not available through regular radio. I pay for these services and it should not be up to the National Association of Broadcasters to dictate what I am permitted to hear. I respectfully urge the FCC to reject the NAB's petition 04-160 and to support XM radio's ability to provide the kind of programming that I have become accustomed to, demand and deserve. This type of radio is the "radio of the future", and soon will give all listeners the choice of station genre and quality they want. Please do the right thing and keep XM Radio free to provide the quality of service they can. Respectfully Robert Penton
